Unable to furnish items listed on reverse side
hereof, because:

Supply exhausted at source. Will furnish when
available.

Items are: not published - out of print -
obsolete - rescinded.

Request more information as follows:

Superseded by:

Advise if you want this new item furnished.

Attached are to bring your copy up to date.

Initial distribution.

As requested.

The following points might be added:

1. Emphasize the shortsightedness of building special machines for special jobs. It is much more costly in the long run, like buying cheap shoes is more costly than buying a good pair. Look at the 003 - iron a drug on the market to the tune of over a million dollars.
2. The way Eastman works, all 3 machines if contrasted for simultaneously would probably cost no more than any two of them if contrasted for separately.
3. In the post war period RAM will be a godsend because ^{comparatively} only a few people will be needed to operate it. ~~and~~ ^{IBM} machines and personnel will be absolutely and completely OUT.
4. as these machines are being built new changes will develop which will make them ~~of~~ ^{of} more + more universal in application.

I think the paper is excellent
