I. DEFINITION AND APPLICATION OF TOP SECRET CREAM

The following explanatory matter pertaining to the definition and application of TOP SECRET CREAM is furnished for your information and guidance:

1. It may be noted that TOP SECRET CREAM indicates both the classification and the category of material so stamped. CREAM actually denotes a category of intelligence. Therefore the following directions for the application of TOP SECRET CREAM are based on procedures necessary to protect the intelligence itself. Of necessity they concern some of the processes involved in its preparation.

2. Signal Intelligence (Communication Intelligence). All intelligence derived from the study of radio transmissions and other communications is known as communication intelligence. It consists of two categories:

   a. Special Intelligence. That signal intelligence which results from the decryption of the texts or substance of encrypted communications constitutes Special Intelligence. This category of intelligence is TOP SECRET and is designated as CREAM.

   b. Traffic Intelligence. That signal intelligence which is obtained from intercepted communications by all means short of decryption constitutes Traffic Intelligence. This category of intelligence is SECRET and, subsequent to agreement at the present conference, will be designated as IVORY.

3. TOP SECRET CREAM. Thos materials which constitute TOP SECRET CREAM and the conditions under which they must be so stamped are as follows:

<table>
