Note:

At 10:15 to 10:45 I presented essence of idea to [ ] as my own, informal one to get his reaction. Teller present.

- 1) He very appreciative + thanked me for generous offer + thinking on their behalf.
- 2) He quite dubious about possibility of their authorities willingness to expand [ ] by this means + ~~for~~ any long time bases, since
  - a) Treasury has ~~been~~ kind (they now 3 times as big as figured on at end of WW II) and
  - b) They are unable to fill quotas already existing + unfilled because of shortage of manpower of the grades needed or that would help.
- 3) But suggestion that they could employ some of their [ ] dons + scholars now back at their universities, set them up ~~for~~ a short-term (year or two or so) as a special project with a separate building + facilities in the way of analytical machinery does appeal to him as very interesting + with potentialities.

I thanked him. Wanted him to think of this not as being a generous offer but as a way of our getting much more for U.S. per dollar of expenditure this way as against handing out money to other Nato countries such as [ ] + [ ] for mutual aid. Told him would discuss this on my return home + see if any legal barriers exist
