

# NATIONAL SECURITY AGENCY CYBERSECURITY INFORMATION

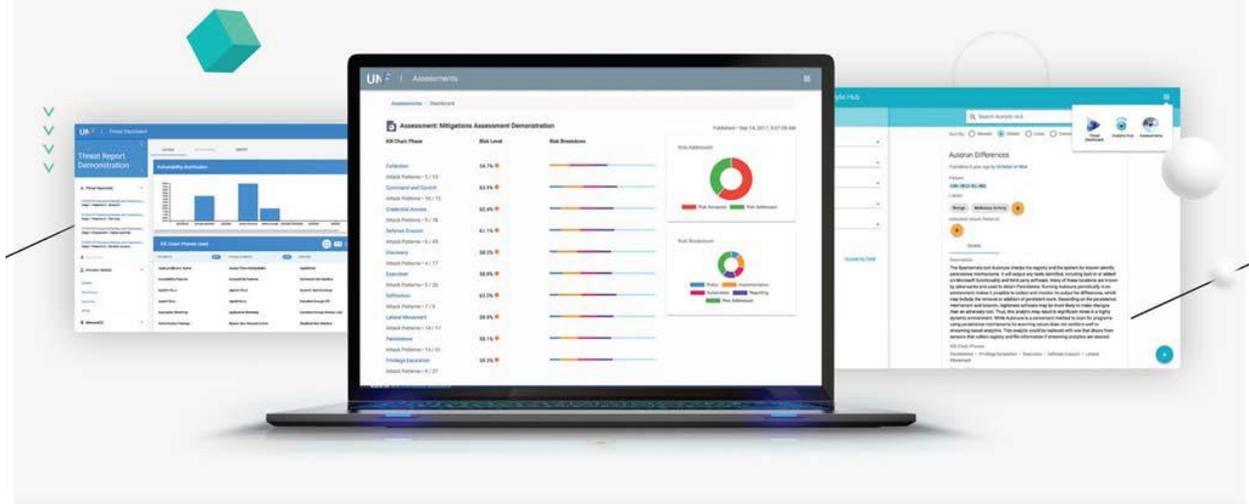

## UNFETTER

### Net Defenders Meet Threat Analysts.

For the first time, we're bringing together Net Defenders and Threat Analysts. Net Defenders need the ability to make operational decisions based off of complex threat data published by Threat Analysts.

Unfetter is a unique platform that unifies the Net Defender and Threat Analyst communities, breaking down barriers through seamless data sharing across the enterprise.

Enabling the real-time exchange of threat data and analytics based on the MITRE ATT&CK™ Framework, Unfetter allows organizations to evaluate and implement defensive measures based on effectiveness and value.

## Shareable, Actionable Threat Data

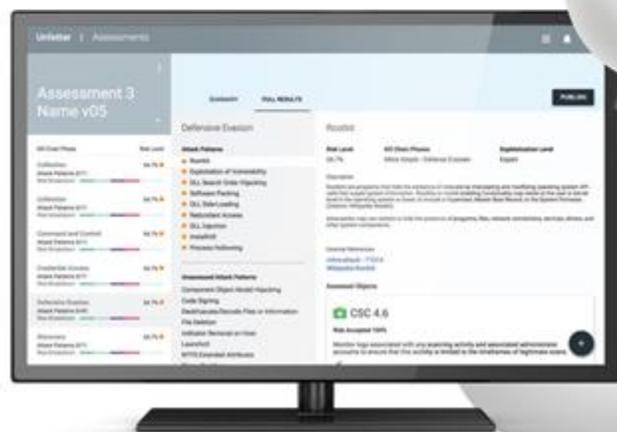

Unfetter equips Net Defenders and Threat Analysts with two powerful tools called Analytic Exchange and Capabilities Assessment so threat data is not only shareable but actionable.

The **Analytic Exchange** allows Threat Analysts to publish and share complex cyber threat information with other analysts. The Exchange leverages the MITRE ATT&CK™ Framework to categorize analytics and establish a common baseline for collaboration across the entire cyber community.

**Capability Assessments** allow Net Defenders to leverage complex threat data from the Analytic Exchange to dynamically defend their networks. Net Defenders can objectively assess defenses, compare existing and future capabilities, and quickly discover analytics to guide investments and implement mitigations to defend their environments.

## Built for the Community

Unfetter is a community-driven suite of open source tools leveraging the MITRE ATT&CK™ Framework, shifting the focus from indicators to a threat driven, behavior-based methodology. This allows you to more effectively assess your risk, advance your security posture, and implement mitigations in a systemic, measurable, and meaningful way.

## Unleash the Power

Learn more about how Unfetter can defend your network by visiting our website, or download the platform on GitHub today.
