

NSA/CSS Evaluated Products List for Magnetic Degaussers

OVERVIEW

Devices included on this list have passed evaluation by meeting requirements set by the NSA/CSS for sanitizing magnetic tapes and magnetic hard disk drives. Meant to serve as guidance, inclusion in this document is not an endorsement by the NSA/CSS or the U.S. Government. All listed products sanitize TS/SCI and below.

QUALIFICATIONS FOR APPROVAL

Performance testing evaluates the degausser's ability to sanitize magnetic storage devices. Degaussers listed in this document are rated by the coercivity of the storage device they can securely erase.

Coercivity is measured in Oersteds (Oe) and indicates which magnetic storage device types the degausser is authorized to sanitize. The Oe rating of the magnetic storage device can be equal to, but not greater than, the NSA-listed Oe rating of the degausser. (Refer to page 5 for magnetic storage device types and their Oe ratings.)

Failure to adhere to NSA designated Oe ratings, including Longitudinal (L) and Perpendicular (P) designations, WILL NOT ensure the complete erasure of data.

Degaussers requiring multiple passes, adaptors or disassembly of magnetic storage devices are identified as such. Equipment is listed in alphabetic order by vendor. Model numbers on equipment must match the model numbers shown in this list. Alternate or previously used retail names appear in parentheses. Models that are no longer manufactured but still approved are included.

Due to advances in hard disk drive technology NSA will no longer accept degaussers for evaluation with magnetic fields less than 30,000 Gauss.

Vendors submitting equipment for evaluation will no longer have their return shipping costs funded by NSA.

Questions about specific models not shown can be directed to the Center for Storage Device Sanitization Research at 301-688-1053 or CSDSR_NSA@nsa.gov.

This document is updated on an as-needed basis. The procedures for administration and distribution of the EPL are subject to change without notice.

WHAT YOU NEED TO KNOW

1. This list serves as guidance for the sanitization of magnetic hard disk drives* and magnetic tape. For the sanitization of these magnetic storage device types please refer to the *NSA/CSS 9-12 Storage Device Sanitization Manual*.
2. Remove all labels or markings that indicate previous use or classification.
3. It is required to follow degaussing with physical destruction by deforming the platters inside all hard disk drives. Refer to the *NSA/CSS Evaluated Products List for Hard Disk Drive Destruction Devices*.
4. Inclusion in this list does not guarantee the continued performance of equipment. Customers should re-test equipment according to the manufacturer, or through the use of an NSA/CSS approved magnetic field verification device as identified on page 3.
5. Each degausser listed offers different convenience features, footprints, throughput rates and power requirements. Contact the vendor to identify the unit(s) best suited to your site's needs.
6. **The NSA/CSS conducts continuous research on data recovery and may remove products from this EPL as the data storage industry changes.**
 - When a product is removed from this EPL, a six year grace period is in effect for DoD customers. IC customers should follow your organization's policy regarding this matter. Government Contractors should follow guidance/policy of their cognizant government industrial security oversight organization.

* No device listed herein is approved to sanitize HAMR (Heat Assisted Magnetic Recording) media. Please refer to the *NSA/CSS 9-12 Storage Device Sanitization Manual* for alternative sanitization methods.
