~~CONFIDENTIAL~~

4. AS-20 AS-71 19 May 47 1. In response to the oral request by Captain Woehlke for recommendations and comments regarding patent applications of William F. Friedman, serial numbers 478,193, - 478,868, and 551,172, numbers 478,193 and 478,868 were circulated through AS-80 and AS-90.

2. Certain background information with respect to the two cases and brief descriptions of the inventions thereof appear in Comment 1.

3. AS-70 concurs with the conclusions of AS-80 and AS-90.

4. Serial Number 551,172 was not circulated since the application had never been classified. A draft of the case was considered before filing; the views of the interested branches and individuals may be found in an R & W, 24 July 1944, subject: Authenticating Device, through Chief, C Branch, to Commanding Officer, Signal Security Agency, and six subsequent actions, the final action being an approval by the Assistant Chief, Signal Security Agency, for the filing of an unclassified patent application.

5. Return of the copies of the applications is requested.

THRU: AS-80

AS-90 AS-71 6 May 47 Applications for patent SN 478,193 and
SN 478, 868

1. Inclosures 1 and 2 are forwarded for evaluation and return.
2. The applications are currently classified confidential. The question is whether the inventions may be declassified so that patents can issue and be exploited commercially.
3. Both disclosures relate to facsimile privacy apparatus.
 - a. Serial Number 478,193 involves the derivation of an on-off signal from a black and white message (picture) and another on-off signal from a dummy picture. The dummy message may or may not be intelligible in itself. The two signals are added by a system of relays so that, when message and dummy signals are alike (both "ons" or both "offs"), an off signal is transmitted while two unlike currents result in the transmission of an on signal. This is, in other words, according to the so-called Vernam rule. At a receiving station, the dummy message or key is subtracted.
 - b. Serial Number 478, 868 describes a system essentially like the above except that addition is accomplished by tubes instead of relays.
4. Further information about the subject applications may be obtained if necessary, from Chief, AS-72.
