

Mr Friedman

Mr Graham is on leave for the balance of the week but left the attached note with me.

While I do not understand from this note just how it is intended to control the tubes, there is no doubt that the system can be worked for radio and in view it should be covered in the patent papers.

Loewen.

Maj. Evans -
 Friedman & I were talking
 over the differential exper-
 stent and it appears that
 the same arrangement with
 out relays could be made
 with one or two ^{or three} vacuum
 tubes for radio transmitting
 & receiving. <sup>split circuits synchronized &
opposite at any instant.</sup> We believe we
 should not take this up
 in this particular patent
 but rather in another one.

G.
