MEMORANDUM FOR COLONEL HAROLD G. HAYES, USA
Army Security Agency
WDGAS-10, Pentagon Building
Washington, D. C.

Subject: Analysis and Discussions of Present and Future Status of CCM.

Enclosure: (A) Copy of Isomorphism analysis on CCM (Shaw-Stephens Solution).

1. Enclosure (a) is forwarded herewith for such study and comment as you desire.

2. It is recommended that you, and such technical advisors as you desire, come to my office on 26 September at 1400 for a conference with me and certain of my assistants. Please advise if the above date and time are satisfactory, or if you prefer some other date or time.

3. If you agree, I propose that we discuss the following items:

   a. What is the present security of the CCM in view of its long use and the possibilities of foreign solution, perhaps along lines shown to be possible by the Shaw-Stephens solution?

   b. What modifications of CCM are practicable and how long would it take to make same effective?

   c. What changes in U.S. use of CCM are desirable to reduce dependence on it?

   d. Why not accelerate early Joint use of CSP 2900 in view of desirability of reducing use of CCM and possibly increasing lower level use of ECM?

Declassified and approved for release by NSA on 09-20-2013 pursuant to E.O. 13526
e. Should Army and Navy holders of CCM be warned regarding its use and security?

f. Should State Department and Coast Guard be notified of status of CCM security and, if so, what discussions of CCM modifications and use should be held with UK representatives? Can and should U.S. and combined use of CCM be modified and/or reduced as much as practicable?

/s/ E. E. Stone
