My Dear Friedman -

Received today a copy of patent #1,857,374 on Cryptograph Enciphering and Deciphering Device, and am gratified accordingly.

It is noted that Rowe has turned the original over to you for keeping. Now I don't believe I have ever known a person who I would rather have hold the original than you, but in this particular case, if agreeable to you, I would like to keep the original for sentimental reasons and the fitness of things. You see this particular patent I consider to be my own baby, in which I believe you will agree, besides

In the device we are working on now and in which you are named as principle the circumstances are different to the above.

Very truly yours  
George A. Graham
