Proposed Application for Patent of Theodore L. Przywiecki for ORIENTATION DEVICE (Case #4)

*J. J. [unclear]*

3. With reference to paragraph 5 of Action 1, it is recommended that the subject application be nonclassified if all reference to any pending classified application is deleted.

4. It is further recommended that the entire matter of patent application in relation to the SIGNIN be reviewed with the Teletype Corporation. Contract W-44-114-SC-9/10/12 SIGNIN states that all developments from this device applying strictly to Teletype principles shall accrue to Teletype Corporation and therefore it is believed advisable that Teletype be granted blanket authority for making patent applications for strictly Teletype components; these patents to be nonclassified, and further that these patent applications be not subject to review by this Agency.

4. AS-71 AS-14 6 Apr 48

1. The recommendations in Pars. 1 and 3 of Action 2 appear somewhat inconsistent. It is my recommendation that if action on this application is urgent it be filed and classified similarly with the associated applications. Then at an early date action along the lines outlined in Par. 4 of Action 2 be initiated. I do not concur in least clause of Par. 4 of Action 2; I think that all the applications, if they are going to be declassified, be subject to review by this Agency before declassification, as a final action.

2. Reference Par. 4 of Action 1, recommend permission be granted for limited disclosure under Permit B, until this whole matter has been finally settled.

TO:  
AS-71

1. It is recommended that permission be granted the Teletype Corporation to file subject application in the United States Patent Office. This patent application should be classified as CONFIDENTIAL.

2. With reference to paragraph 4 of Action 1, it is believed advisable to permit limited disclosure of the subject matter under Permit B.
