ARMY SERVICE FORCES

SIGNAL SECURITY AGENCY

WASHINGTON 25, D C

SPSIF-3B

26 September 1945

SUBJECT: Storage space for SIGSALY Terminal equipment

THRU: Chief, Equipment Branch

TO: Chief, Security Division

1. It is expected that a number of SIGSALY terminals will be removed from service in the next few months.

2. Present plans do not indicate any further use for these terminals and it is expected that approval to salvage the equipment will be forthcoming.

3. In connection with the above, it is considered that this Agency affords the most secure space for storage while awaiting a decision for final disposal and it is currently reported that the basement of building 4 of "B" building is available for this purpose.

4. It is requested that approval to store these terminal units at Arlington Hall Station be obtained and if granted, it is proposed to transfer to this Agency all terminals now or subsequently removed from service.

5. In the event that a decision to salvage the discontinued units is reached, it is recommended that the salvaged components be applied to the maintenance of the remaining system terminals, to Equipment Branch projects or disposed of through regular salvage channels in the order shown.
