REMARKS

1. As promised, I am sending you herewith the paper which sets forth USCIB classification principles for references to Sigint matters in lectures. This may or may not be of assistance to you in connection with the problem which you outlined to me the other day.

2. Please return this to me as soon as you have finished with it as copies are scarce.

USCIB Classification Principles for
References to Signal Matters in Lectures

<u>USCIB</u> <u>Classification</u>	<u>LSIB</u> <u>Classification</u>	<u>Subject Matter</u>
Non-classified	(Not mentioned)	Non-specific or hypothetical reference to Communication Intelligence and Signal Intelligence without any association of that function with specific activities and organizations other than Army Security Agency as a whole and U. S. Naval Communications as a whole.
RESTRICTED	CONFIDENTIAL	Association of specific phases of Communication Intelligence activity with <u>types of units.</u>
RESTRICTED	SECRET	Elementary principles of traffic analysis and military cryptanalysis.
RESTRICTED	SECRET	The terms "United States Communication Intelligence Board" and "United States Communication Intelligence Coordinating Committee", and their abbreviations, "USCIB" and "USCICC".
CONFIDENTIAL	SECRET	Association of broad Communication Intelligence functions with specific activities and organizations by name (except as provided under "non-classified", above).
CONFIDENTIAL	SECRET	Charts and descriptions of the organization of Army Security Agency, of Communications Supplementary Activities, and of USCIB-USCICC.
CONFIDENTIAL	SECRET	Individual intercept and D/F station products and operational effectiveness.
SECRET	SECRET	Standing operating procedures and instruction manuals governing the respective Communication Intelligence organization (except instructions to processing activities governing their processing detail and the handling and security of their final products.)
SECRET	SECRET	Intercept assignments.
SECRET	SECRET	Detailed intercept and D/F plans and overall operational effectiveness of intercept and D/F organization as a whole.

~~TOP SECRET COPSE~~

<u>USCIB Classification</u>	<u>LSIB Classification</u>	<u>Subject Matter</u>
SECRET	TOP SECRET	General reference to the fact of crypt-analytic success against low-grade military cryptosystems during and before World War II.
SECRET	TOP SECRET	References to the Communications Intel-ligence (identified as such) derived from low-grade military cryptosystems during World War II, and from those high-grade systems in the case of which successful cryptanalysis has already been revealed by official action (e.g. the Congressional investigation of the attack on Pearl Harbor).
SECRET	TOP SECRET	Details of traffic analysis (not involving high-grade call-sign decryption) as applied to enemy communications during World War II.
SECRET	(Not mentioned but self-evident)	Records of the proceedings of USCIB and USCICC and sub-committees thereof, unless more highly classified.
TOP SECRET	GLINT	The detailed mission of each Communication Intelligence organization as a whole.
TOP SECRET	GLINT	Instructions to processing activities governing their processing in detail and the handling and security of their final products.
TOP SECRET	(Not authorized under any circumstances)	The fact of any peace-time collaboration in Communication Intelligence matters between U.S. agencies and foreign agencies.
TOP SECRET	TOP SECRET GLINT	(Except as provided under "SECRET" above) references to the Communication Intelligence (identified as such) derived from crypt-analysis of enemy military systems of high-grade (except the highest grade) during World War II, provided the references cannot lead to inferences as to the specific systems involved.
TOP SECRET	GLINT	Detailed references to, and descriptions of, cryptanalytic success against low-grade military cryptographic systems during and before World War II.

USCIB
Classification

LSIB
Classification

Subject Matter

TOP SECRET and SECRET, with
Communication Intelligence
code-word designations.

The subject matter falling within these
categories is defined in CSP 1805 (A)
and War Department Regulations for
Security and Dissemination of Commu-
nication Intelligence, as interpreted and
amplified below:

The special code word applied to Special Intelligence shall be used to
designate items of information, all or part of which have been derived from Special
Intelligence, whether or not such derivation is obvious, and information which
reveals the degree of success attained or the ability to attain success in specific
problems in the field of Special Intelligence; and all documents and communications
in which this code word itself necessarily appears in its code word sense.
